

DIY GABION PLANTER

Step by Step

What You'll Need:

- Protective Gloves
- Bolt Cutter
- Angle Grinder
- Planter
- Gabion Basket
- Helical Corners
- Stones

1 Unfold gabion

Unpack the gabion, ensuring all sides are properly unfolded and ready for assembly.

2 Cut the helicals to size

Measure the dimensions of the gabion panels and cut the helicals to match accordingly.

3 Connect the corners

Cut around the shapes using wire cutters. Leave approximately 2 centimetres extra on the sides.

4 Measure your planter

Measure your planter pot and mark where you have to cut the lid panel.

5 Cut out the lid

Using bolt cutters or an angle grinder, cut a hole in the lid large enough to accommodate the planter pot.

6 Start filling the basket

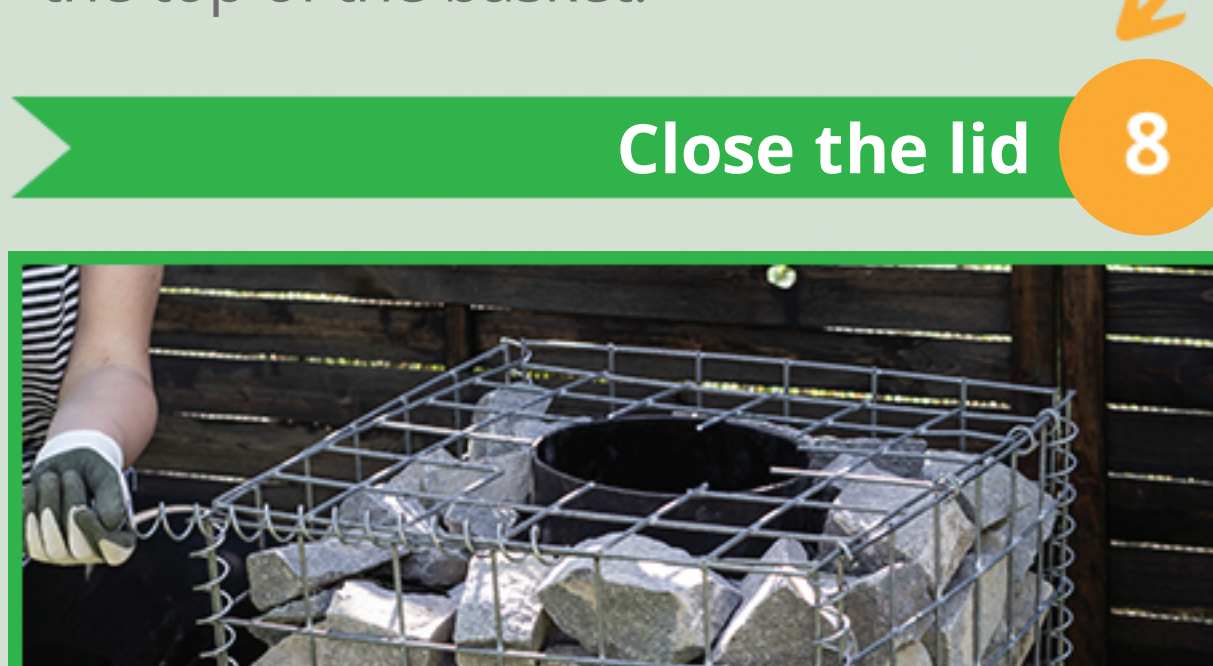

Start filling your basket with stone, until you reach the level you want to place your planter.

7 Add your planter

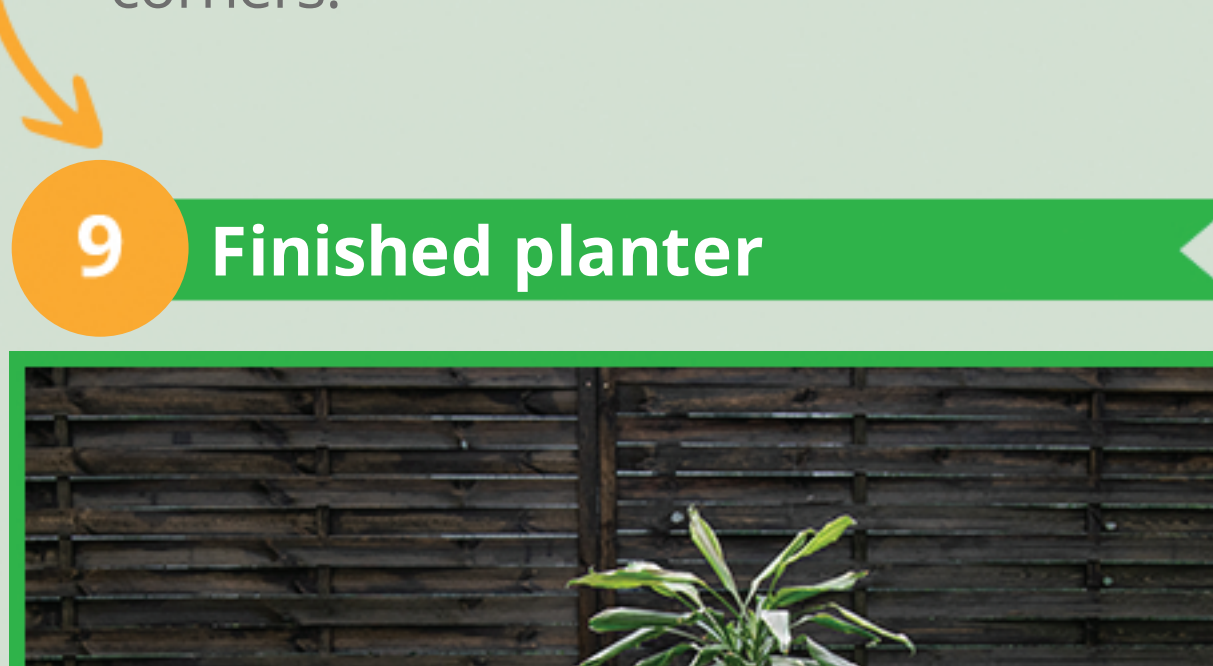

Place the pot on top of the stones so that it aligns with the top of the gabion. Adjust by adding more stones underneath if necessary to achieve levelness. Continue filling the basket around the planter pot until reaching the top of the basket.

8 Close the lid

Close the lid and join the corners with a helical, repeat this process for all corners.

9 Finished planter

Congratulations! You have successfully learnt how to make gabion planter. Now, enjoy the finished project!
